

The Office of Policy Analysis, within the Office of the Secretary, is seeking an economist to work on natural resource and environmental policy issues involving water, energy, natural resource damages and restoration, and climate change. This is a high visibility position with the potential to be involved in current policy issues and related research.

This position is located within the U.S. Department of the Interior; Office of the Secretary; Assistant Secretary - Policy, Management, and Budget; Office of Policy Analysis, and is located in Washington, DC.

**Major Duties:**

- Work as part of a staff of resource economists furnishing issue analysis to the Secretary, the Deputy Secretary and Assistant Secretary-Policy, Management and Budget.
- Assists in the design of economic studies to be executed by other bureaus and offices.
- Evaluates studies for adequacy of methods and relevance to policy, and advises senior specialists regarding the conduct, results and policy implications of the studies.
- Conducts economic and statistical analyses and research of natural resource policy issues; extend and apply economic and financial analysis techniques to selected natural resource problems.
- Maintains up-to-date knowledge and capabilities in natural resource and environmental issues.

Applicants need to apply via USAJobs.
